                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SEQUENCE OF 1282-1609 FROM N.A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Comprising one long and three short arms with globules at end.

THE GAMMA-1 CHAIN IS A SUBUNIT OF LAMININ-1 (EHS LAMININ), LAMININ-2 (MEROSIN), LAMININ-3 (S-LAMININ), LAMININ-4 (S-LAMININ-6 (K-LAMININ) AND LAMININ-7 (KS-LAMININ).

SUBCELLULAR LOCATION: Extracellular.

TISSUE SPECIFICITY: FOUND IN THE BASEMENT MEMBRANES (MAJOI COMPONENT).

DOMAIN: THE ALPHA-HELICAL DOMAINS I AND II ARE THOUGHT TO DOMAIN: THE ALPHA-HELICAL DOMAINS I AND II ARE THOUGHT TO DOMAIN: THE ALPHA-HELICAL DOMAINS I AND IN THE BASEMENT MEMBRANES (MAJOI COMPONENT).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Seq. 1:275-277(1991).

FUNCTION: Binding to cells via a high affinity receptor, laminin is thought to mediate the attachment, migration, and organization of cells into tissues during embryonic development by interacting with other extracellular matrix components.

SUBUNIT: Laminin is a complex glycoprotein, consisting of three different polypeptide chains (alpha, beta, gamma), which are bour to each other by disulfide bonds into a cross-shaped molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WITH OTHER LAMININ CHAINS TO FORM A COILED COIL S
DOWAIN: DOMAINS VI AND IV ARE GLOBULAR.
SIMILARITY: Contains 1 laminin N-terminal domain.
SIMILARITY: Contains 11 laminin EGF-like domains.
SIMILARITY: Contains 1 laminin IV domain.

"Differential regulation of microcubule-associated protein 1B (MAP1B)
in rat CNS and PNS during development.";

J. Neurosci. Res. 49:319-332(1997).

-!- FUNCTION: The function of brain MAPS is essentially unknown.
Phosphorylated MAP1B may play a role in the cytoskeletal changes
that accompany neurite extension. Possibly MAP1B Binds to at least
two tubulin subunits in the polymer, and this bridging of subunits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Rienitz A., Grenningloh G., Hermans-Borgmeyer I., Kirsch J.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PTM: riuspins, To MAPIA.
SIMILARITY: TO MAPIA fragment of this protein (resincation: A C-terminal fragment of this protein (resincation: A C-terminal described as neuraxin in Ref. 3. 2459) was originally described as neuraxin in ref. 3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               nerve levels are high early in development but decrease during postnatal development and are low in adults. In dorsal root ganglia levels remain high throughout development. InDUCTION: By nerve growth factor.

INDUCTION: By nerve growth factor.

IOMANN: Has a highly basic region with many copies of the sequence KKEE and KKEI/V, repeated but not at fixed intervals, which is responsible for the binding of MAP1B to microtubules.

PTM: LC1 is coexpressed with MAP1B. It is a polypeptide generated from MAP1B by proteolytic processing. It is free to associate with both MAP1A and MAP1B. It interacts with the amino-terminal region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           of MAP1B (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DEVELOPMENTAL STAGE: In cerebral cortex, spinal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  heart or muscle

Biol. Chem. 270:14533-14540(1995).

-!- FUNCTION: CELLULAR MYOSIN APPEARS TO PLAY A ROLE IN CYTOKIN CELL SHAPE, AND SPECIALIZED FUNCTIONS SUCH AS SECRETION AND CAPPING (BY SIMILARITY).

-!- SUBUNIT: MYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS OF 2 H CHAIN SUBUNITS (MHC), 2 ALKALI LIGHT CHAIN SUBUNITS (MLC) A REGULATORY LIGHT CHAIN SUBUNITS (MLC-2).

-!- DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHO CYCLES OF A 28-RESIDUE REPEAT PATTERN COMPOSED OF 4 HEPTAPE CHARACTERISTIC FOR ALPHA-HELICAL COILED COILS.
-!- SIMILARITY: Contains 1 myosin-like globular head domain.
-!- SIMILARITY: Contains 1 IQ domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     "Neuronal cell expression of inserted isoforms myosin heavy chain II-B.";
